The Process Pictures

Making The jig, Heat Bending process of all the loops, and Laminating process of all longer members

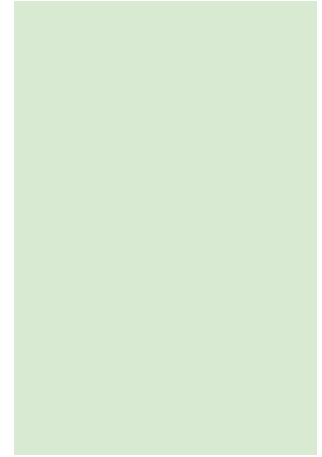

Heat Bending to expand the size of the smaller loops due to the shrinkage, and cleaning the burnt parts of the loops

Finishing the Laminated loops,
Removing Araldite, Making groove
cuts for the lap joints, Sanding the
skin off from the strips

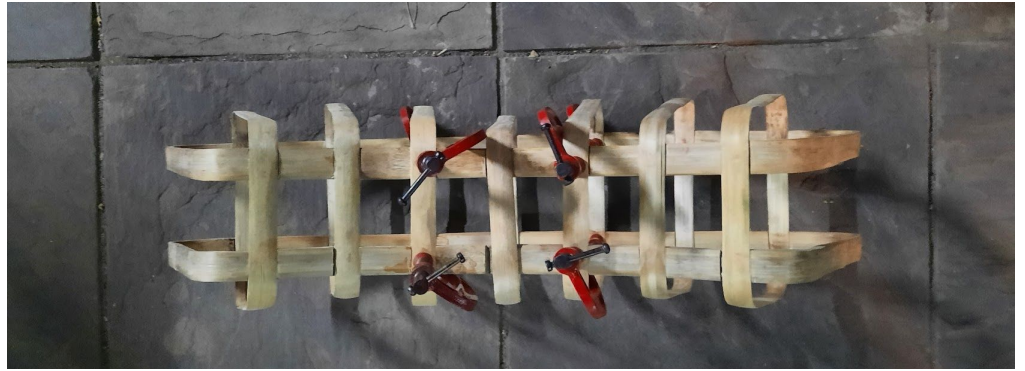

Fixing the smaller loop to the longer loops using lap joints from both ends to the center

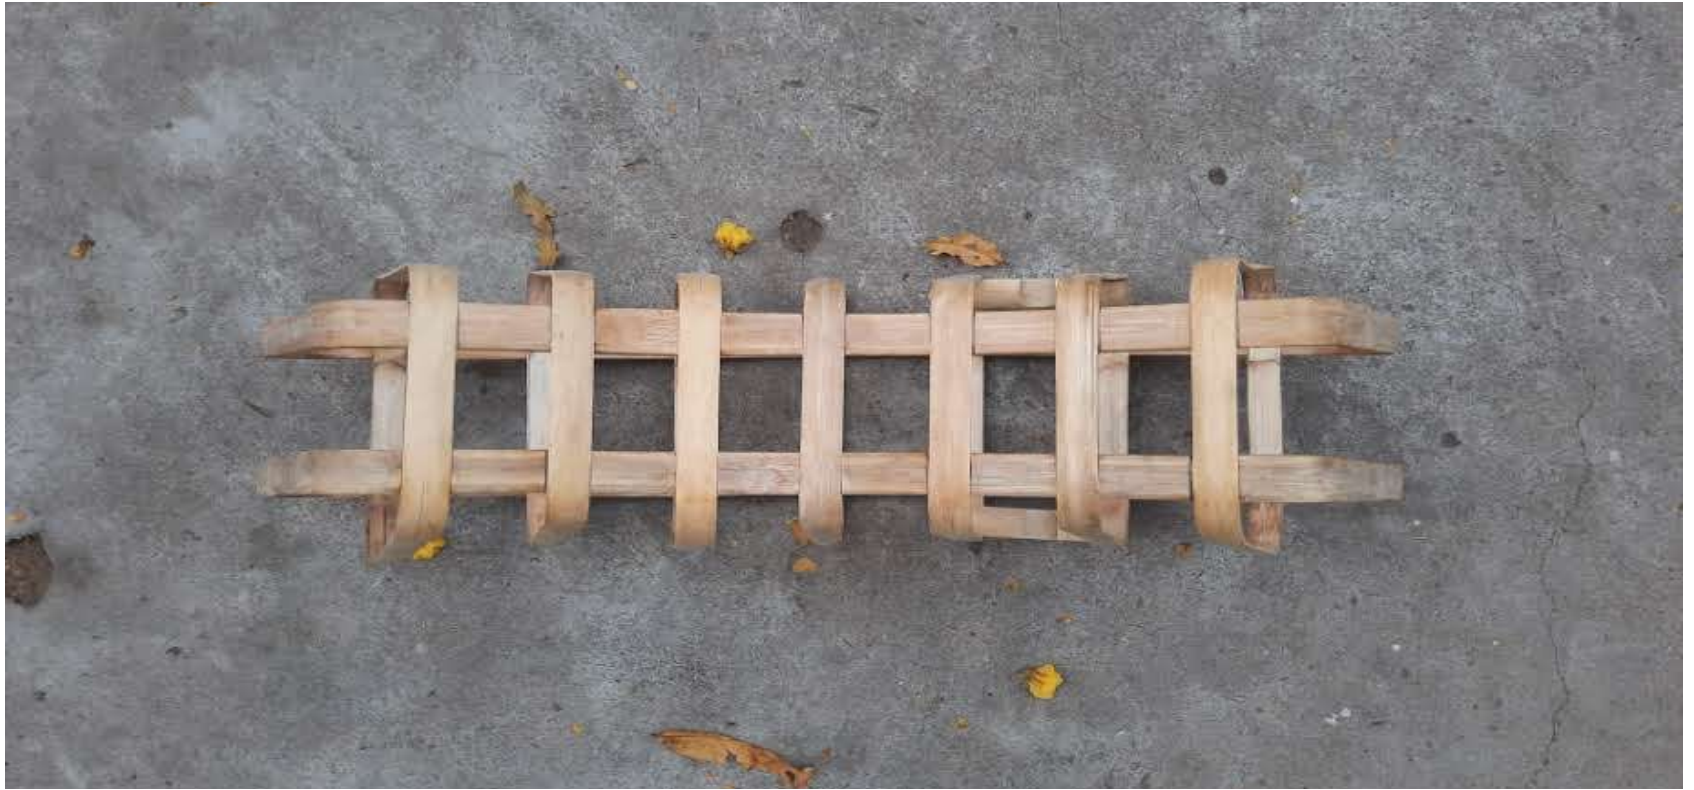

Cleaning araldite marks, and fixing the support for the legrest

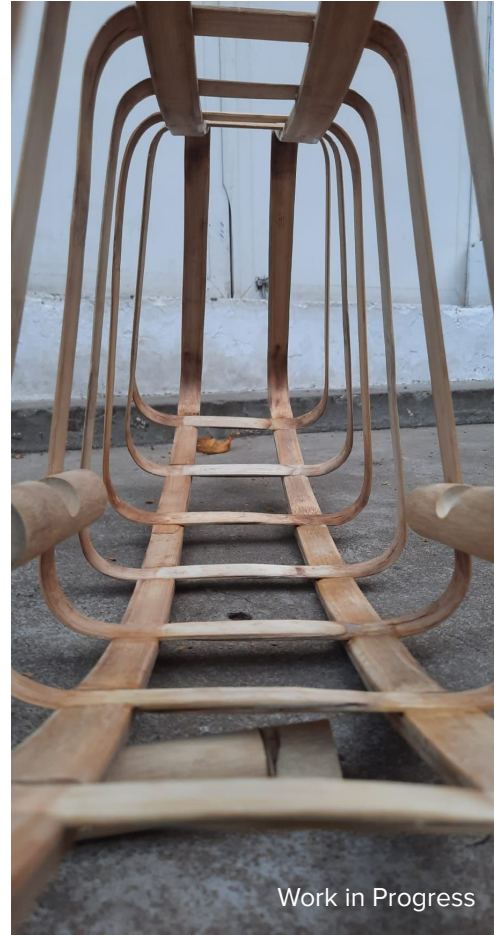

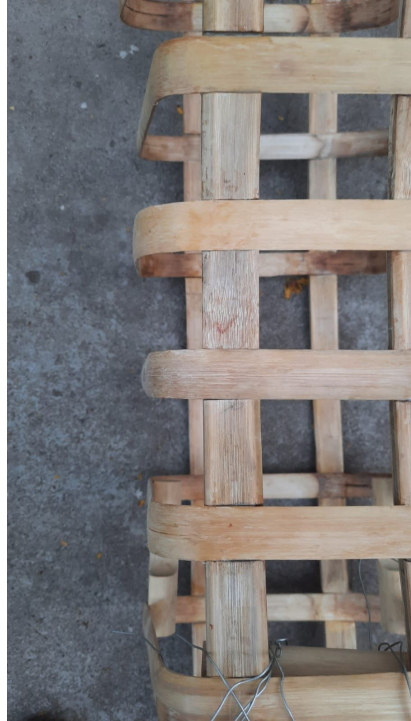

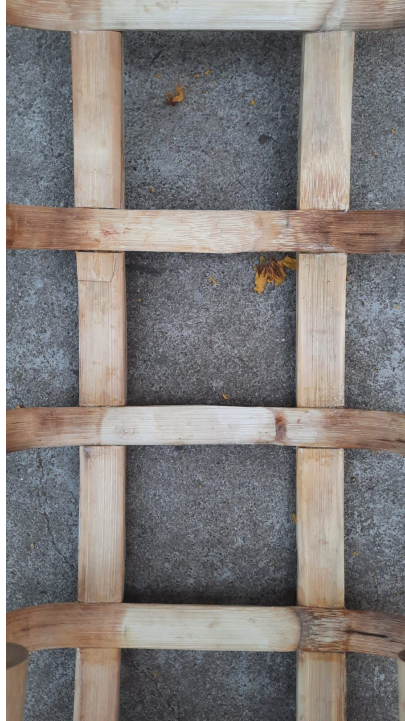

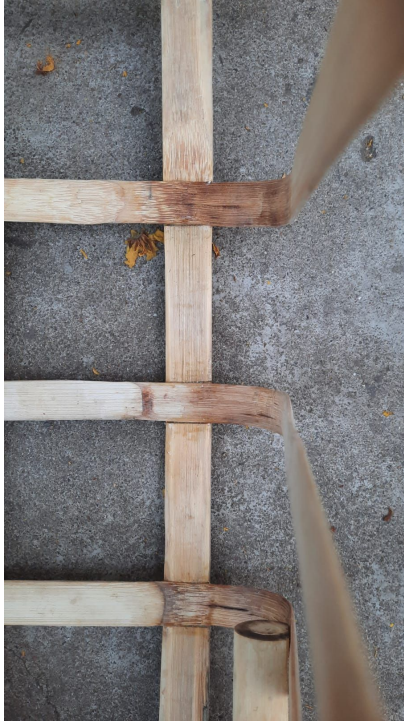

Shaping of the spine to fix the handle
