

MOONREED

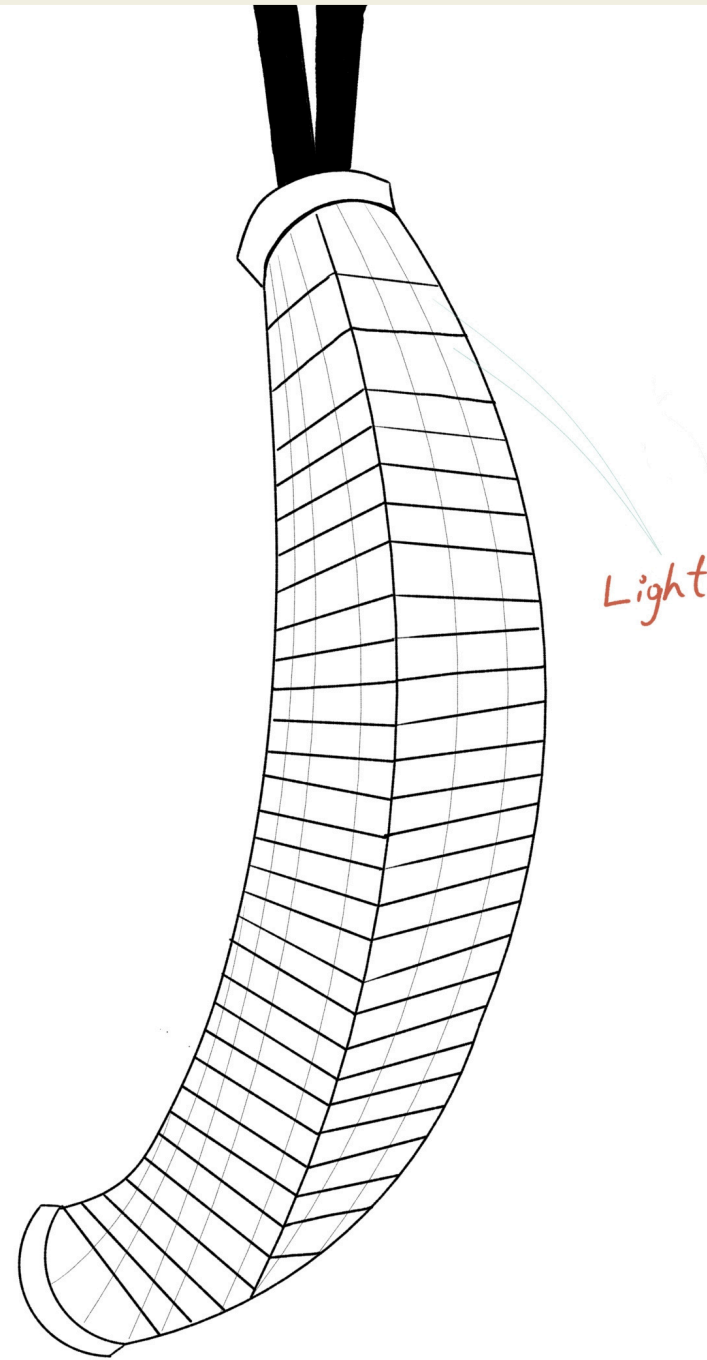

DEVELOPMENT

Mold Shaping

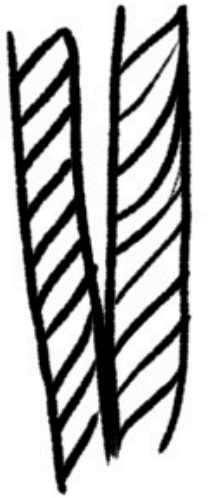

Twined Method Weaving

Structural Formation

For illumination, I used a filament-style tubular LED bulb, chosen for its warm light output, energy efficiency, and minimal heat emission.

Hanging with sack thread

PROCESS

MATERIALS

Reed Grass

- A natural plant with long, hollow stalks
- Flexible when wet, and strong when dried
- Grows in large patches called reed beds

Reed Grass

Sack Theard

Bulb

FINAL PRODUCT

Inspired by the crescent moon, this lamp is crafted from reed grass using a twined weaving method over a molded form. Hung with sack thread and lit by a warm LED bulb, it casts calming shadows, creating a peaceful atmosphere that blends beautifully into natural and sustainable interiors.
