

different way of seeing the objects around us, how we interact with them and how they change with our changing lives.

'Here and There' brings together young people aged 18-25, and combining locally sourced materials and participants' own materials, works with them to make a stool using simple tools and processes.

4

young people today face an *uncertain future*.

pressure comes from all directions: the climate crisis, economic instability, post-pandemic mental health struggles; it can feel *insurmountable*.

so what can be *done*?

start local!

connect with community!

learn new practical skills!

disrupt destructive capitalist norms!

excerpts from *Here and There* booklet

method: frame

1. Saw wood to length (600mm for legs, 300mm for seat slats)

2. Tape legs together. Drill a hole, wide enough for the bolt, halfway along the length, all the way through both legs.

method: seat

3. Wind the fabric strip around the seat frame. You may need to tie strips together to get a continuous piece of yarn.

4. Once the frame is reasonably covered, tie the fabric yarn to the opposite seat slat. These vertical pieces of fabric are the *warp*.

method: seat

5. Thread your piece of wood (called a *shed stick*) under and over each strip of the warp.

6. Feed the fabric yarn along the shed stick until you reach the end. This is the *weft*. Leave the end loose.

You may find it helpful to tape one end of the yarn to a pen or pencil.
