

Vanyā

Reimagines bamboo as a contemporary lifestyle material by combining traditional craftsmanship with modern product design. The project explores how indigenous making techniques can create products that are functional, timeless, and environmentally conscious. The bag uses bamboo strips to form a rollable body, paired with solid bamboo handles connected through handcrafted mechanical joinery. This construction provides strength, durability, and ease of use while showcasing the natural beauty of the material. The development involved extensive prototyping and experimentation to understand bamboo's behaviour, flexibility, and structural capabilities. Collaborating closely with artisans throughout the process provided invaluable insight into traditional craftsmanship while informing the final design.

FINAL OUTCOME

Material Palette

- Handcrafted bamboo structure
- Bamboo mechanical joinery
- Natural jute shoulder straps
- Cotton inner pouch

Product Specifications

- Dimensions: 1 × 1 ft
- Weight: Approximately 300 g
- Lightweight, compact, and fully collapsible for portability.
